

Invitation

Sicherheit durch Innovation

Live-Event at Security Robotics

We cordially invite you to the live event at Security Robotics. As a **leader in security robotics**, we present **innovative** solutions for perimeter protection through robotics.

In our digitalized world, we will show how our robots, state-of-the-art sensor technology and highly skilled personnel can enhance your security.

The networked total solution

Our robot range includes diverse types such as walking robots, wheeled robots, flying robots and information robots, which together form a comprehensive safety network. We present the advanced G-Fences 2400 sensor and our newly developed Nucron - IoT Injector for enhanced surveillance.

Our **advanced control centers** collect, analyze and forward relevant data to **optimize human-machine coordination**.

We would like to highlight **ACUDA** (Autonomous Center of Digital Actors), our in-house platform that serves as the heart of our solutions. All our systems are coordinated via ACUDA. Not only do we present our own technologies and solutions, but we also **showcase** a number of systems from our technology partners with whom we collaborate. Through these partnerships, we are expanding our capabilities and can offer even more comprehensive and **customized security solutions**.

Ablauf

27.06.-29.06.

Discover the future of security through Security Robotics at our live event. Experience exciting insights into the latest developments and exchange ideas with our experts and industry leaders.

10:00 Arrival

10:30 Welcome & Presentation Security Robotics & Portfolio Robots and Software

11:00 Demonstration of possibilities and the technology

12:00 Break with catering

12:30 to 14:00 Questions and answers, time for visitors to try out and test

The entire process will be presented:

- Patrol: (robots autonomously patrol predefined routes)
- Support, Go1 with small camera is remotely controlled by SMA
- Event: (sensors, fence council detector, person recognition)
- Message: Control center
- Intervention: (human & machine)

Reserve your place today for a new dimension in safety.
We look forward to your participation!

Your team from Security Robotics
